RTMD Device: Haier U-COOL RTMD Device: Haier U-COOL Pro RTMD Device: Haier U-COOL LoRa

Overview

Based on GPRS, 4G, LoRa and other communication technologies, Haier Biomedical provides three RTMD (Remote Temperature Monitoring Device) devices: U-COOL, U-COOL-LoRa and U-COOL Pro, which can meet customers' demand for real-time monitoring of temperature changes of cold chain equipment and facilitate customers to remotely monitor the running status of cold chain equipment through computers, mobile phones and other electronic devices, timely remind customers to deal with the failures such as abnormal temperature, abnormal door opening, power failure of cold chain equipment in the process of operation, and help customers analyze the current status of stored items through a large number of temperature data reports.

Applicable for the monitoring of the stored items in the fridge, cold rooms, refrigerated vehicles, transport coolers, liquid nitrogen containers in hospitals, in disease control centers, blood stations, laboratories, warehouses, pharmacies and machine rooms.

• Fundamental Functions

Power failure detection function: the information is uploaded to platform with external power failure detection probe (LoRa)

Door opening and closing detection: the information is uploaded to the platform through 2G/3G/4G network (U-COOL Pro and LoRa)

Real-time temperature monitoring: the information is uploaded to the platform in real-time through 2G/3G/4G network with the external temperature sensor

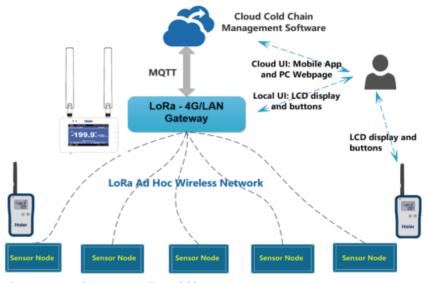

Remote alarms: supporting SMS, voice and

Data export: local storage of 60,000 pieces of exportable data in PDF

Positioning function: LBS positioning, through \bigcirc 2G/3G/4G network upload monitoring platform

Battery powered, Long range, Expandable Sensors: Temperature, Humidity, Magnetic Door Sensor, Relay, Displacement, etc

LoRa system schematic diagram

Remote Temperature Monitoring Solutions

• Product Advantages

Remote monitoring function: Users can remotely monitor data through the Web terminal or APP

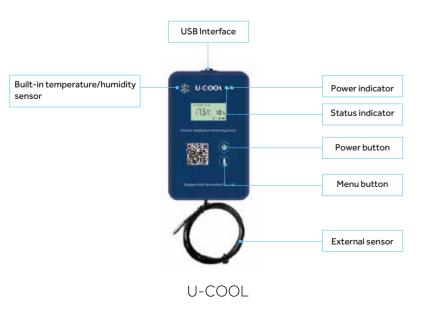

- Data export: local storage of 60,000 pieces of Ē exportable data in PDF
- Wide temperature monitoring range: -200 ° C to 8 150 °C, supporting various temperature monitoring requirements

Multi-point collection node support: U-COOL-LoRa supports a maximum of 60 collection loggers

- Applicable for the global market: supporting 180 countries worldwide, supporting SMS, telephone dialing, email alarms
- The server of the monitoring system is located in Europe with low data communication latency and supports 5-year data cloud backup
- The monitoring platform supports regular data report sending function convenient for scientific research institutes and international organizations to carry out long-term data tracking and research

Haier U-COOL

Supporting remote SMS, voice and email alarms

B: Mult Pro Multi-point temperature monitoring for U-COOL

Fully accredited: WHO/PQS, CE(EU), ISO/IEC 27001

Supporting two alarm modes buzzer and LED

Level-to-level administration of user privilege of the platform without limited number of the users

Supporting remote monitoring on multiple platforms including Android, iOS, WEB

Multi-language available for the monitoring platform: Chinese, English, Spanish, French, . Russian, Japanese...

• Features

- O Used for temperature monitoring of cold chain products such as refrigerators, with the characteristics of small size, real-time temperature monitoring, historical data can be queried, historical data can be exported, abnormal data alarm and so on
- The product has a built-in temperature/ humidity probe and an external temperature probe, which can detect the ambient temperature and humidity and the temperature of the measured device in real time
- O Supporting global SMS, telephone dialing and email alarm; Automatically generate equipment operation report to designated personnel
- Supporting network operation in 180 countries around the world
- O Support 5-year data backup

Haier U-COOL LoRa

U-COOL-LoRa

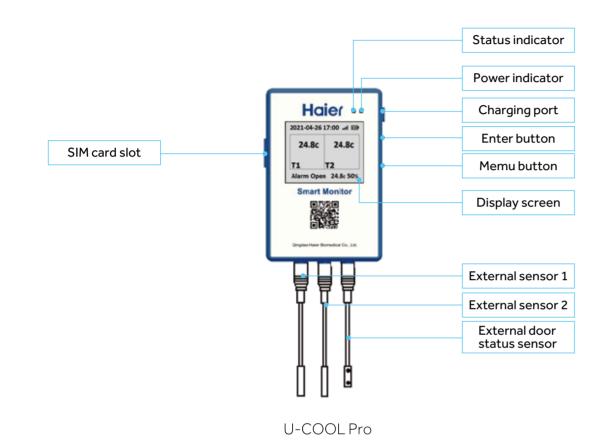

Components: smart gateway + temperature data logger+ door on-off logger+ power outage logger+ LoRa alarm

• Features

- Customers can use computers, mobile phones and other electronic devices to remotely monitor the operation status of cold chain products. Timely reminding customers to deal with high/low temperature, door ajar, power failure and other faults, and helping customers to analyze the current state of stored goods through a large number of temperature data reports
- O Supporting global SMS, telephone dialing and email alarm; Automatically generate equipment operation report to designated personnel
- O Supporting network operation in 180 countries around the world
- O Supporting 5-year data backup

Haier U-COOL Pro

• Features

- Remote monitoring of cold chain product running status, timely reminding customers to deal with high/ low temperature, door ajar, power failure and other faults, and helping customers to analyze the current state of stored goods through a large number of temperature data reports
- Multi-probe product, customers can choose common probe & PT100 probe according to the scene, with two temperature probes and one door switch detection probe as standard
- Supporting global SMS, telephone dialing and email alarm; Automatically generate equipment operation report to designated personnel
- O Supporting network operation in 180 countries around the world
- Supporting 5-year data backup

Remote Temperature Monitoring Solutions

PLM-6 Solar Panel

Scope of application:

This product is suitable for daily charging of Haier Biomedical RTMD equipment such as Ucool and Ucool pro using solar modules. It is recommended to be used in remote and sunny areas and areas with power shortage.

Product Features:

In order to overcome the situation of long-term power loss, battery damage, inability to charge and equipment failure caused by long-term unmanned management after power failure of equipment in remote areas, solar panels are the best choice.

Product Advantages

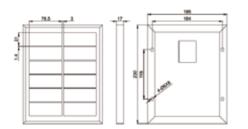

> Adopt high-efficiency PERC solar cells

High conversion efficiency \smallsetminus Low decay rate \searrow Low temperature coefficient.

User Friendly Design

With an integrated adjustable bracket, the inclination angle can be adjusted from 0 to 60°, which is suitable for variety of different installation environments.

Haier Global Equipment Monitoring System

The physical address of the global equipment monitoring system server is located in Europe. Users can remotely log in the system using only the user name and password to view temperature and humidity data, alarm information, location information, device management, and data export. If the temperature exceeds the threshold, the system sends SMS, emails, and phone calls to the management personnel. The system has the characteristics of strong data processing ability, high reliability and fast operation, and users can monitor the cold chain related data in real time.
