

# Planetary Ball Mill PM 400

#### **General Information**

Planetary Ball Mills are used wherever the highest degree of fineness is required. Apart from the classical mixing and size reduction processes, the mills also meet all the technical requirements for colloidal grinding and have the energy input necessary for mechanical alloying processes. The extremely high centrifugal forces of the Planetary Ball Mills result in very high pulverization energy and therefore short grinding times.

The PM 400 is a robust floor model with 4 grinding stations.

## **Application Examples**

alloys, bones, ceramics, charcoal, chemical products, coal, coke, electronic scrap, fibres, glass, limestone, minerals, ores, paper, plant materials, quartz, seeds, sewage sludge, soils, waste samples, wood, ...

## **Product Advantages**

- powerful and quick grinding down to nano range
- comfortable parameter setting via display and ergonomic 1-button operation
- automatic grinding chamber ventilation
- 10 SOPs can be stored
- programmable starting time
- power failure backup ensures storage of remaining grinding time
- grinding with up to 26.8 x acceleration of gravity
- reproducible results due to energy and speed control
- suitable for long-term trials and continuous use
- 2 different grinding modes (dry and wet)
- optional pressure and temperature measuring system PM GrindControl
- measurement of energy input
- wide range of materials for contamination free grinding
- Safety Slider for safe operation

# Planetary Ball Mill PM 400

#### **Features**

Applications pulverizing, mixing, homogenizing, colloidal milling, mechanical alloying

Field of application agriculture, biology, chemistry / plastics, construction materials, engineering /

electronics, environment, geology / metallurgy, glass / ceramics, medicine /

pharmaceuticals

Feed material soft, hard, brittle, fibrous - dry or wet

Size reduction principle impact, friction

Material feed size\* < 10 mm

Final fineness\* < 1 μm, for colloidal grinding < 0.1 μm

Batch size / feed quantity\* max. 4 x 220 ml, max. 8 x 20ml with stacked grinding jars

No. of grinding stations 4 / 2

 Speed ratio
 1:-2 / 1:-2.5 / 1:-3

 Sun wheel speed
 30 - 400 min-1

Effective sun wheel diameter 300 mm

Type of grinding jars "comfort", optional areation covers, safety closure devices

Material of grinding tools hardened steel, stainless steel, tungsten carbide, agate, sintered aluminium

oxide, zirconium oxide

Grinding jar sizes 12 ml / 25 ml / 50 ml / 80 ml / 125 ml / 250 ml / 500 ml

Setting of grinding time digital, 00:00:01 to 99:59:59
Interval operation yes, with direction reversal
Interval time 00:00:01 to 99:59:59

Pause time 00:00:01 to 99:59:59
Storable SOPs 10

Measurement of input energy

possible

Interface RS 232 / RS 485

Drive asynchron motor with frequency converter

yes

Drive power 1.5 kW Protection code IP 30

Power consumption ~ 2100 W (VA)

W x H x D closed 836 x 1220 (1900) x 780 mm

Net weight ~ 290 kg

Workplace related emission

value

LpAeq < 85 dB(A)

Documentation Operation & Application Video

Standards CE

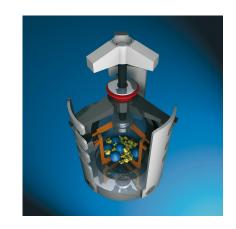

<sup>\*</sup>depending on feed material and instrument configuration/settings

# Planetary Ball Mill PM 400

## **Function Principle**

The grinding jars are arranged eccentrically on the sun wheel of the planetary ball mill. The direction of movement of the sun wheel is opposite to that of the grinding jars in the ratio 1:-2 (or 1:-2.5 or 1:-3). The grinding balls in the grinding jars are subjected to superimposed rotational movements, the so-called Coriolis forces. The difference in speeds between the balls and grinding jars produces an interaction between frictional and impact forces, which releases high dynamic energies. The interplay between these forces produces the high and very effective degree of size reduction of the planetary ball mill.
